The Honorable Michael Guest
Third Congressional District of Mississippi
450 Cannon House Office Building
Washington, DC 20515

Dear Congressman Guest,

It is my honor to serve as Mayor of the City of Louisville, MS. As Mayor, it is my privilege and responsibility to ensure that our residents, schools, medical facilities, businesses, manufacturing facilities, and essential government facilities have access to clean and safe drinking water. Therefore, I write in strong support of the City of Louisville's proposed construction of a new water supply well, including the replacement of service pumps and installation of a new raw water transmission line. This investment represents a critical step forward in ensuring the long-term delivery of clean, reliable drinking water to the residents and businesses of Louisville and the broader Winston County area.

The City's existing water infrastructure is aging and currently operating at approximately 80 percent of its designed capacity. As demand continues to grow, this limited capacity poses challenges not only to system reliability but also to future development opportunities. The proposed project will strengthen system performance, improve redundancy, and increase overall capacity—positioning the community to confidently accommodate residential growth, commercial expansion, and new industrial recruitment.

Importantly, the project's impact extends beyond Louisville. The additional capacity and system improvements will provide meaningful support to the Town of Noxapater and Pugh's Mill Water Association, strengthening infrastructure across multiple service areas and reinforcing regional collaboration. This broader benefit aligns with strategic efforts to promote balanced growth and sustainable development throughout Winston County.

As Mayor, I fully recognize the significance of this water infrastructure project and the transformative impact it will have on our community's public health, economic vitality, and long-term resilience. We are committed to working alongside all project partners to ensure its successful implementation. As Mayor and a Louisville native, I am keenly interested in making sure the City of Louisville has clean and safe drinking water for generations to come. Thank you for your consideration of this important infrastructure project in the City of Louisville.

Respectfully,

A handwritten signature in blue ink that reads "Will Hill". The signature is fluid and cursive, with the first name "Will" being larger and more prominent than the last name "Hill".

Will Hill

Washington, DC 20515

Dear Congressman Guest,

On behalf of Winston County, I write in strong support of the City of Louisville's proposed construction of a new water supply well, including the replacement of service pumps and installation of a new raw water transmission line. This project represents a unified regional effort, with the City of Louisville, the Town of Noxapater, Pugh's Mill Water Association, and the Winston County Board of Supervisors aligned in recognizing its long-term importance to our county.

This investment goes well beyond a routine infrastructure upgrade. It is a strategic initiative that strengthens the stability, resilience, and economic competitiveness of Winston County. Louisville's water system not only serves its own residents and businesses but also provides critical support to surrounding communities. The reliability of this system directly impacts households, public services, and employers throughout the county.

Currently operating at approximately 80 percent of its designed capacity, the existing system leaves limited flexibility during periods of peak demand, emergency events, or necessary maintenance. Adding a new well and upgraded transmission infrastructure will increase capacity, provide essential redundancy, and ensure dependable backup capability—safeguarding public health, fire protection, and uninterrupted service.

From an economic development perspective, reliable utility infrastructure is foundational. Manufacturers, developers, and site selectors evaluate capacity, redundancy, and long-term sustainability when making investment decisions. By proactively strengthening its water system, Louisville—and Winston County as a whole—demonstrates readiness for residential growth, commercial expansion, and industrial recruitment.

This project is critical to maintaining the quality of life our citizens expect while positioning Winston County for future growth. We respectfully urge favorable consideration of this essential infrastructure investment, which will serve the communities of Louisville, Noxapater, and all of Winston County for generations to come.

Sincerely,

Luke Parkes
Board President

Dear Congressman Guest,

It is my honor to serve as Mayor of the Town of Noxapater, MS. The town of Noxapater is dependent upon the water supply systems of the City of Louisville, and we are very supportive of Louisville's efforts to provide clean and safe drinking water. Therefore, I write in strong support of the City of Louisville's proposed construction of a new water supply well, including the replacement of service pumps and installation of a new raw water transmission line. This investment represents a critical step forward in ensuring the long-term delivery of clean, reliable drinking water to the residents and businesses of Noxapater, Louisville and the broader Winston County area.

I understand from my conversations with Louisville's elected leadership that their existing water infrastructure is aging and currently operating at approximately 80 percent of its designed capacity. As demand continues to grow in Winston County, this limited capacity poses challenges not only to system reliability but also to future development opportunities. The proposed project will strengthen system performance, improve redundancy, and increase overall capacity—positioning the community to confidently accommodate residential growth, commercial expansion, and new industrial recruitment.

Importantly, the project's impact unites communities across Winston County as Noxapater, Louisville, and Winston County Board of Supervisors are all supportive of this project. The additional capacity and system improvements will provide meaningful support to the City of Louisville, Town of Noxapater and Pugh's Mill Water Association, strengthening infrastructure across multiple service areas and reinforcing regional collaboration. This broader benefit aligns with strategic efforts to promote balanced growth and sustainable development throughout Winston County.

As Mayor, I fully recognize the significance of this water infrastructure project and the transformative impact it will have on our community's public health, economic vitality, and long-term resilience. We are committed to working alongside the City of Louisville to ensure its successful implementation. As Mayor of Noxapater, I am keenly interested in making sure the Town of Noxapater has clean and safe drinking water for generations to come. Thank you for your consideration of this important infrastructure project that supports the Town of Noxapater, the City of Louisville, and the broader Winston County community.

Sincerely,

Sammy Carter

Dear Congressman Guest,

As Executive Director of the Winston Partnership, I write in strong support of the City of Louisville's proposed construction of a new water supply well, including the replacement of service pumps and installation of a new raw water transmission line. This investment represents a critical step forward in ensuring the long-term delivery of clean, reliable drinking water to the residents and businesses of Louisville and the broader Winston County area.

The City's existing water infrastructure is aging and currently operating at approximately 80 percent of its designed capacity. As demand continues to grow, this limited capacity poses challenges not only to system reliability but also to future development opportunities. The proposed project will strengthen system performance, improve redundancy, and increase overall capacity—positioning the community to confidently accommodate residential growth, commercial expansion, and new industrial recruitment.

Reliable water infrastructure is foundational to economic development. Modern manufacturers and site selectors consistently evaluate utility capacity, redundancy, and long-term sustainability when making location decisions. By proactively investing in this new well and associated infrastructure, the City of Louisville demonstrates its commitment to maintaining a competitive business environment. This project will directly support planned and future housing developments while enhancing our ability to recruit and retain quality industrial prospects within the city limits.

Importantly, the project's impact extends beyond Louisville. The additional capacity and system improvements will provide meaningful support to the Town of Noxapater and Pugh's Mill Water Association, strengthening infrastructure across multiple service areas and reinforcing regional collaboration. This broader benefit aligns with the Winston Partnership's strategic efforts to promote balanced growth and sustainable development throughout Winston County.

The Winston Partnership fully recognizes the significance of this water infrastructure project and the transformative impact it will have on our community's public health, economic vitality, and long-term resilience. We are committed to working alongside the City of Louisville and all project partners to ensure its successful implementation. Our mission to grow and diversify the local business and industry base depends on strong foundational infrastructure, and we are proud to support this important investment in our community's future.

Sincerely,

Glen C. Haab

Dear Congressman Guest,

It is my honor to serve as State Senator for Senate District 32, which includes the City of Louisville and portions of Winston County. I write in strong support of the City of Louisville's proposed construction of a new water supply well, including the replacement of service pumps and installation of a new raw water transmission line. This investment represents a critical step forward in ensuring the long-term delivery of clean, reliable drinking water to the residents and businesses of Louisville and the broader Winston County area. This project will ensure that the residents, schools, medical facilities, businesses, manufacturing facilities, and essential government facilities in Louisville have access to clean and safe drinking water.

I understand that the City's existing water infrastructure is aging and currently operating at approximately 80 percent of its designed capacity. As demand continues to grow, this limited capacity poses challenges not only to system reliability but also to future development opportunities. The proposed project will strengthen system performance, improve redundancy, and increase overall capacity—positioning the community to confidently accommodate residential growth, commercial expansion, and new industrial recruitment.

Importantly, the project's impact extends beyond Louisville. The additional capacity and system improvements will provide meaningful support to the Town of Noxapater and Pugh's Mill Water Association, strengthening infrastructure across multiple service areas and reinforcing regional collaboration. This broader benefit aligns with strategic efforts to promote balanced growth and sustainable development throughout Winston County.

I fully recognize and appreciate the significance of this water infrastructure project and the transformative impact it will have on our community's public health, economic vitality, and long-term resilience. The Mayor of Louisville is a proven leader who is committed to working alongside all project partners to ensure its successful implementation. With many constituents' dependent upon the water supply systems of the City of Louisville, I am keenly interested in seeing this project to fruition, and with it the assurance of clean and safe drinking water for generations to come for so many in Louisville and Winston County. Thank you for your consideration of this important infrastructure project in the City of Louisville.

Sincerely,

Rod Hickman
State Senator, District 32
